

Get the most out of Xbox Adaptive Controller

CUSTOMIZE FOR MAXIMUM SUCCESS

AbleNet Switches

Program this switch for any command. The switch provides an auditory click and tactile feedback.

Logitech Extreme 3D Pro Joystick

The stationed joystick has a stable weighted base to give you traction and an 8-way hat switch designed for input to flight sims.

Stealth Switch Foot Pedal

The pedal has a weighted base and non-skid pads for stability and comes with a 6-foot cable. Suited for users with hemiplegia that can use their non-affected side.

One Handed Joystick

The one-handed joystick is ideal for hemiplegia CP users, as you can use your non-affected side to control the lever.

Micro Light Switch

Requires only a feather light touch. Ideal for users with minimal strength.

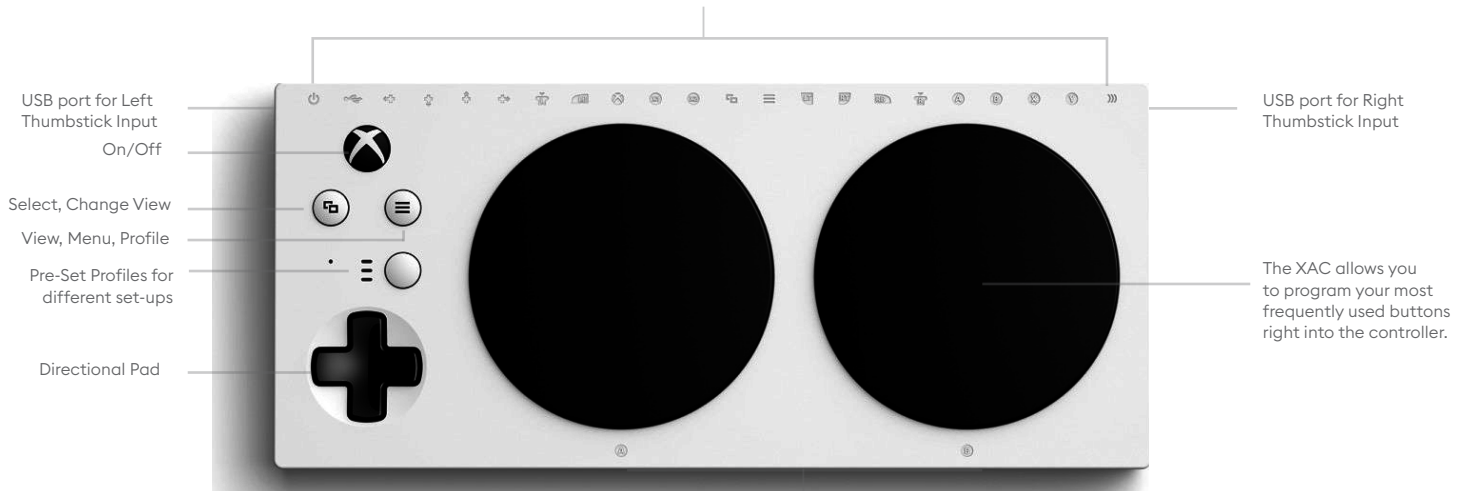

3D Rudder Foot Controller

Move through your games and VR with your feet so you can use your hands and other limbs to grab, shoot, pull, push, etc.

BUILT TO PERSONALIZE RIGHT OUT OF THE BOX

The Xbox Adaptive Controller has 20 different 3.5mm jacks that allow you to connect a variety of external adaptive accessories (i.e. thumbsticks, headswitches, external buttons, triggers, etc.)

FOR EVEN MORE POWER TRY XBOX & COPILOT

Copilot links two controllers together so you can use them as if they were one. Go to **Settings > Ease of Access > Controller** to turn on copilot. With Copilot, a person who can't fully access all gameplay can add a friend, sibling or parent as a team. You can also use Copilot to access all the setting and menu navigation. It's a perfect companion for XAC.
